PICK CUP

**THE PICKCUP HAS BEEN
DESIGNED TO LEAD THE BALL-
RETRIEVAL MARKET. THIS IS A NEW
COURSE ESSENTIAL, IT'S NOT A
GIMMICK OR MARKETING TOOL.**

*The PickCup, designed to conform
to R&A and USGA rules.*

Developed in-tandem with Greenkeepers across the world, who informed us of the increase in damage to cup edges since the amended rules allowing the pin to remain in the hole during play.

It features several core design characteristics of note:

- The removable flagstick adapter is flexible to attach to any size flagstick
- The cup is fixed on the adapter once in position
- The cup features drainage channels to reduce water and debris
- The edge of the cup features a rubber trim so not to damage the lip when removing from the hole or when laid on the green
- Can remain in place during official competitions

This is the most complete ball-retrieval system on the market and has been designed to meet the needs of Greenkeepers and Course Superintendents first. The choice of materials, design and build quality is all specific to course conditions and regular use.

Your customers want a reliable and functional solution, PickCup is easy for players to use and will help protect green and hole conditions for longer. Saving time and money.

The PickCup comes in two variants, the Standard and Promo versions. If you're looking for a cost effective, durable and legal solution for protecting your putting surfaces and cups, get in touch with one of our team today. **Get in touch to find out more or to make a sales enquiry.**

THE PICKCUP IS DESIGNED TO PROTECT THE HOLE EDGE WHEN LEAVING THE PIN IN!

The PickCup is a new product that's been developed in response to the recent rule change that now permits players to leave the flag in the hole when putting, a rule change designed to help speed up play but which has resulted in unexpected damage to the hole edge caused by players not removing the flagstick when retrieving their ball.

So how does it work?

After holing out, when a player gets to the hole, if they gently lift the flagstick from the hole they'll find the the PickCup has collected their ball from the hole and it's easy for them to retrieve without grabbing inside with their fingers or putter.

It saves time, is easier than bending over to collect a ball from the hole and as custodians of better green care, we're keen to stress that by removing the ball using this method rather than sticking your hand or putter in the hole, it helps prevent damage to the edge of the hole too.

The PickCup is made from weatherproof polyurethane plastic with a flex-rubber edge that helps to protect the edge of the hole, and is fitted with a universal adapter so that it can be easily attached to any conventional flagstick.

Unlike competing products the PickCup conforms to the specific details of the R&A and USGA guidelines, meaning that it can remain in place during competitions too.

1) The PickCup can be secured below the 3" depth requirement from the height of the lip so not to interfere with a ball in play.

2) The PickCup is easy to attach and remove but when attached remains in a static position on the flagstick, again so not to interfere with a ball in play.

In addition to this, the PickCup has a patent pending design that incorporates a rubber perimeter to the cup, which helps protect the lip from damage when being removed from the hole but also protects the green if the flagstick is laid down on the surface.

The PickCup has been developed with the style and attention to detail that you would expect from Pitchfix and it feels and performs like a quality piece of equipment.

The PickCup comes in two variants, the Standard and Promo versions. If you're looking for a cost effective, durable and legal solution for protecting your putting surfaces and cups, get in touch with one of our team today. **Get in touch to find out more or to make a sales enquiry.**
